

Eco activity

- What types of plastic do you have most of?

I have HDPE No. 2 plastic (milk bottles)

- What surprised me?

Well, what surprised me the most was that most of the plastic I collected can't be recycled.

- Count the more significant piles, is this more or less than you expected?

I have 48 pieces of plastic, to be honest, I ^{didn't} expected there to be any less as we are five members of a family however it would be good that the food companies develop more plastic that is recyclable.

- What types of plastic are there?

I had: HDPE No. 2, PET, PP and PS.

- Which ones do I recycle? (locally)

I locally recycle PET (water bottles)

- Which of these could be significantly reduced, and how?

A way of reducing plastic is filling carton milk bottles with fresh milk instead of using plastic bottles.

- What else have you learnt from this experiment? -

I learned that there is a lot of improvement to be made and that the amount of plastic that we used can be reduced significantly. For example: use tetrapack or any other material that can be recycled.
