

# OUR VALUES

## ◇ Strong sustainability

We believe that human activities should be maintained within the regenerative capacity of the biosphere.

## ◇ Respect and interdependencies

We are all interdependent. Respect for oneself, for others and for all forms of life allows us to recognise the intrinsic value of everyone and leads us to live better together.

## ◇ Humility and quality

We do not have all the answers to the complex questions of sustainable development but we always seek to act with accuracy and quality in mind.

We endeavour to stay at the forefront of knowledge in education for sustainable development and strive for continuous improvement.

## ◇ Diversity, inclusion and collaboration

Diversity is precious; we seek to build on the strengths of everyone.

We seek to form ties and find synergies with our educational partners and with other actors for sustainable development.

## ◇ The power of emotions and positivity for personal transformation

We are convinced that emotions prepare for action and that positive messages and attitudes foster the motivation and the desire to act.

We are aiming for a transformative, continuous learning process.

## ◇ Empowerment and free will

We seek to help the children and young people we work with to be active participants in their learning experience: "To do is to learn!".

We strongly believe in each individual's free will and do not seek to convince but rather to support everyone on their individual learning path and to allow them to take informed decisions on their actions.

## ◇ Impact

We seek in all our activities to have an impact, and are committed to ensuring that the funds entrusted to us are used in the best possible way.
