

ASSOCIATION J'AIME MA PLANÈTE

PEDAGOGICAL APPROACH

PEDAGOGICAL APPROACH

Our educational approach strives for a holistic and transformative learning process that allows for the development of cognitive, transdisciplinary, social and emotional skills. Our activities place the student at the heart of a continuous learning process that is based on the love of nature and an understanding of sustainable development and that follows the learning matrix outlined below:

TO UNDERSTAND

... the interrelations and interdependencies between Man and his environment
...the challenges of sustainable development and the world around us

TO WANT

...protect nature and its inhabitants
... contribute to building a sustainable world

TO BE ABLE TO

... think differently
...form your own opinion
...identify your own lever of action
... imagine/experiment new solutions

TO ACT

... concretely here and now
... adopt new individual and collective attitudes

"ESD empowers learners to make informed decisions and take responsible actions in support of environmental integrity, economic viability and a just society, for present and future generations. future."

UNESCO, roadmap for the implementation of the global action program for Education for Sustainable Development, 2014

Activities

The association works on various themes and offers educational activities which include:
